

QUALITY CERTIFICATE

Repair and Refurbishment of Phacoemulsification handpieces

- MIDES Healthcare Technology GmbH has been ISO 9001 and ISO 13485 certified for over ten years and is regularly audited by accredited certification bodies.
- In particular, the certified process for safety and performance-relevant products warrants that all components or spare parts used in the course of a repair or refurbishment ensure the full functionality and operational safety of the phacoemulsification handpiece within the scope of its product specification.
- Each and every repair and refurbishment are based on a comprehensive reliability analysis (FMEA) of the individual repair and test steps.
- Detailed device inspections are carried out and recorded for all phacoemulsification handpieces before and after repair or refurbishment.
- All repair processes are regularly internally audited by quality managers, and a KPI-based monitoring system ensures the continuous improvement of all repair processes.
